Respostas Teste SQL - Hector Lladó

1.

As colunas que compõe a chave primária de cada tabela são:

Tabela	Coluna
tb_customer	id_customer
tb_customer_address	id_customer + cd_address_type
dm_addess_type	cd_address_type

2.

INSERT INTO tb_customer VALUES ('Joãozinho Silva', 88877766655);

INSERT INTO tb_customer_address VALUES (
    (SELECT id_customer FROM tb_customer WHERE cpf_cnpj = 88877766655),
    (SELECT cd_address_type FROM dm_address_type WHERE
ds_address_type = "Residêncial"),
    'Rua das Flores',
    1,
    NULL,
    '01234-567');

3. Podem ser cadastrados 3 (três) endereços diferentes para um mesmo cliente.

4.

DELETE FROM tb_customer_address WHERE id_customer IN
    (SELECT id_customer FROM tb_customer WHERE cpf_cnpf = xxxxx
    );

DELETE FROM tb_customer WHERE cpf_cnpj = xxxxx;
